STRIPPING: Surfaces that have been painted or glazed before must pass tests for both proper adhesion with the original substrate and compatibility with the new coating. Any old coating that fails these tests must be removed with the use of a chemical paint stripper. This is referred to as Chemical Stripping. Removal of this old coating will allow the new material to bond directly to the original substrate. If testing concludes that a proper bond exists between the substrate and the old coating, that surface will be prepared for the new coating. Wet and dry sanding is used to remove the outermost layer of the old coating to produce a flatter, smoother surface to spray the new finishing material upon. This is referred to as Mechanical stripping. Both processes will require additional charges included in your quote. The additional cost for other stripping needs will depend on the size and type of project.

Other colors require the mixing of pigments, so we cannot guarantee a perfect match on any color as we all might see colors differently. Colors and Textures will vary from manufacturer so samples for Colors and surface textures shown at time of bid should only be considered a guide. If you are not present to approve colors, textures, or specking, we are authorized to proceed without delay. Cost to change or reapply colors or change textures due to lack of presence by customer will be a customer expense.

Countertop resurfacing is a sprayed-on liquid product that cures to a solid conforming to your existing surface.
